

Scenario-Based Questions

1. A client keeps changing requirements frequently. Which model should be used and why?

Answer: Agile — because it handles changing requirements

2. A project has fixed requirements and strict deadlines. Which model is suitable?

Answer: Waterfall — fixed requirements

3. Your team delivers features every 2 weeks. Which methodology is being used?

Answer: Agile (Scrum) — iterative delivery

4. A team struggles due to lack of communication. Which Agile principle is missing?

Answer: Individuals and interactions

5. A project fails because changes were not allowed. What went wrong?

Answer: Rigid model (Waterfall) failed to adapt

6. Your team meets daily for 15 minutes. What is this meeting called and why is it important?

Answer: Daily Scrum — improves communication and tracking

7. A product owner prioritizes tasks. What artifact do they manage?

Answer: Product Backlog

8. A team estimates tasks using cards. What technique is this?

Answer: Planning Poker

9. Your team completed 25 story points this sprint. What metric is this?

Answer: Velocity

10. A graph shows decreasing work over time. What is this called?

Answer: Burndown Chart

11. A feature is complete but fails testing. Is it done? Why?

Answer: Not done — must meet acceptance criteria (Definition of Done)

12. A team delivers product only after 6 months. Which model is this?

Answer: Waterfall

13. A team adapts quickly to changes and releases frequently. Which approach is this?

Answer: Agile

14. A team discusses what went wrong after sprint. What meeting is this?

Answer: Sprint Retrospective

15. A team works without manager control. Which Agile concept is this?

Answer: Self-organizing team

16. A user story is unclear. What should be added?

Answer: Acceptance Criteria

17. A project is delayed due to late feedback. Which model likely used?

Answer: Waterfall

18. A team focuses more on documents than working product. Which approach is this?

Answer: Waterfall

19. A team predicts future work based on past performance. What is this called?

Answer: Forecasting

20. A team avoids unnecessary features. Which principle is this?

Answer: Simplicity

21. A team delivers incomplete software at sprint end. What is missing?

Answer: Working software / Definition of Done

22. A project requires constant customer feedback. Which Agile value applies?

Answer: Customer collaboration over contract negotiation

23. A team identifies a problem slowing work. What is this called?

Answer: Bottleneck

24. A team compares tasks to estimate effort instead of time. What method is this?

Answer: Story Points (relative estimation)

25. A team improves after every sprint. Which practice is this?

Answer: Retrospective (continuous improvement)

Scenario Questions

1. A company employee arrives at office and cannot access email, Teams, or VPN before an important client meeting.

Answer: Incident Management

2. Internet connectivity issue occurs every Friday and temporary fixes are applied, but problem repeats.

Answer: Problem Management

3. Company plans antivirus upgrade for 500 laptops with approvals, testing, and rollback plan.

Answer: Change Enablement (Change Management)

4. New employee onboarding requires laptop, email, VPN, and software access.

Answer: Service Desk

5. Banking application outage must be resolved within defined time limits.

Answer: Service Level Agreement (SLA)

6. Resolution time increased from 4 hours to 9 hours and manager wants improvement.

Answer: Continual Improvement

7. Company cannot track device ownership, warranty, or replacement needs.

Answer: IT Asset Management

8. Payroll update tested and needs safe production deployment.

Answer: Change Enablement (Change Management)

9. Monitoring tool alerts disk usage at 95% before users report issue.

Answer: Monitoring and Event Management

10. CEO laptop issue vs printer issue — which gets priority?

Answer: CEO laptop issue (Higher Priority)

11. Service desk logs and categorizes password reset ticket.

Answer: Logging & Categorization

12. Engineer checks CPU, memory, network, DB for slow application.

Answer: Investigation & Diagnosis

13. Issue resolved and user confirms fix; engineer updates notes.

Answer: Closure

14. IT head suggests optimizing existing tool before buying new one.

Answer: Optimize and Automate

15. Software approval takes too long; leadership wants simpler process.

Answer: Keep it Simple and Practical

16. Company plans IT budget, hiring, and future goals.

Answer: Plan

17. IT meets business heads for feedback and requirements.

Answer: Engage

18. New portal developed, tested, and prepared for launch.

Answer: Design and Transition

19. Password reset solved in first call itself.

Answer: First Call Resolution (FCR)

20. Nationwide payment portal outage affecting revenue.

Answer: P1 (Critical Priority)

21. Change deployed without approval causing downtime.

Answer: Change Enablement (Change Management)

22. Laptop battery issue checked with warranty and replacement eligibility.

Answer: IT Asset Management

23. Frequent password reset tickets → self-service portal introduced.

Answer: Automation / Shift Left / Improve Efficiency

24. Monthly review of incidents, feedback, SLA breaches.

Answer: Continual Improvement

25. CRM app ready and needs deployment with rollback readiness.

Answer: Release Management / Change Enablement

Scenario Based Questions

1. A user says laptop is very slow. CPU usage is 95%. What would you check first?

Answer: Check running processes in Task Manager to identify high CPU-consuming applications or malware.

2. Windows update failed on 50 office PCs after deployment. What patch management mistake may have happened?

Answer: Patch was not tested in a sample/staging environment before deployment.

3. A server crashes every Friday night. How would you investigate?

Answer: Check logs, scheduled tasks, backups, or jobs running at that specific time.

4. Users cannot save files because C: drive is full. What maintenance activities should have prevented this?

Answer: Regular disk cleanup, monitoring disk usage, and alert setup.

5. Company data lost after ransomware attack. What backup strategy should exist?

Answer: Regular full backups with incremental backups and offsite/cloud backup.

6. One system has Chrome v120 while others have v126 causing compatibility issues. What concept is missing?

Answer: Software consistency (standardization).

7. A disk shows SMART warning but system still works. What should IT team do?

Answer: Immediately back up data and replace the disk before failure.

8. User reports internet slow only during meetings. What resource areas should be monitored?

Answer: Network bandwidth, latency, and concurrent usage.

9. Application stopped after OS upgrade. What type of maintenance is needed?

Answer: Adaptive maintenance.

10. Printer issue resolved after restart but happens daily again. What should technician do next?

Answer: Perform root cause analysis instead of temporary fixes.

11. Memory usage reaches 98% every afternoon on server. What can happen and how would you respond?

Answer: System may slow or crash; analyze processes, optimize memory usage, or upgrade RAM.

12. Backup files exist but restore fails during emergency. What lesson does this teach?

Answer: Backups must be regularly tested for successful restoration.

13. A critical log shows repeated login failures at midnight. What may this indicate?

Answer: Possible brute-force attack or unauthorized access attempt.

14. After installing patch, payroll software crashes. What process should have happened before deployment?

Answer: Patch testing and validation in a controlled environment.

15. Temporary files are consuming 30GB on employee systems. How would you solve long term?

Answer: Automate cleanup using scripts or disk cleanup tools regularly.

16. Disk usage alert triggered at 90%. Why are alerts valuable?

Answer: They warn early and help prevent system failure or downtime.

17. User says issue happens randomly and cannot reproduce it. How would you begin troubleshooting?

Answer: Check logs and monitor system behavior over time.

18. Company wants zero downtime during updates. What scheduling strategy should be used?

Answer: Use maintenance windows, rolling updates, or redundancy systems.

19. Server fan clogged with dust causing overheating. Which maintenance type applies before failure?

Answer: Preventive maintenance.

20. System logs show service stopped exactly after antivirus scan starts. What is your next step?

Answer: Investigate conflict between antivirus and service; adjust scan settings or

exclusions.

21. Laptop battery backup reduced after years of use. Which maintenance category could improve usability?

Answer: Perfective maintenance.

22. New accounting software needs Windows 11 but company uses Windows 10. What maintenance is needed?

Answer: Adaptive maintenance.

23. Branch office has no offsite backup and building flood destroys systems. What rule was ignored?

Answer: Offsite backup and disaster recovery planning.

24. User complains system hangs whenever many tabs are opened. What components should you inspect?

Answer: RAM, CPU usage, and browser processes.

25. Manager asks why logs are important in troubleshooting. How would you explain with example?

Answer: Logs record events and errors; e.g., logs can show exact time and cause of a system crash
